Subject: Info on Japan

Kevin, Thanks for meeting w/ Dr. Bergh on Monday. I hope we were able to give you some new information which will be useful in your deliberations.

At the meeting, you asked for more information regarding Japan's plans to deploy fiber-to-the-home. I'm attaching a report entitled "Broadband Policies in Japan: Experiences and Challenges". The report was written by Tasu Taniwaki, the Economic Counselor and Telecommunications Attache at the Embassy of Japan here in Washington.

Please note that on page 1, the author refers to the "e-Japan strategy" which was issued by the Japanese IT Strategy Headquarters in January, 2001. The strategy set the following target for broadband deployment:

"[the strategy is] aimed to provide high-speed always-on access networks to at least 30 million households and ultra high-speed always-on access to 10 million households by the year 2005."

The report defines ultra high-speed as 30 Mbps to 100 Mbps. These speeds can only be provided by means of fiber-to-the-home.

I hope that this information meets your needs. If you need any additional information, please feel free to contact me.

Thanks
Tim
